Abstract

See anonymised manuscript.

Keywords: latent class model, crossed random effects, Dawid–Skene, large language models, annotation, conditional dependence

MSC Classification: 62H30 , 62F15 , 62J12 , 62P25 , 68T50

Declarations

- **Funding:** The authors did not receive support from any organization for the submitted work.
- **Competing interests:** The authors have no relevant financial or non-financial interests to disclose. [Consider disclosing ITM Software LLC / Tuulrik as a non-financial interest; see submission checklist C.]
- **Ethics approval and consent:** Not applicable (no human participants; simulated and public text data).
- **Data availability:** All simulated data are reproducible from the archived code (seeds recorded). [Application data: Comparative Agendas Project (URL, accessed DATE); LLM annotations, prompt templates and model version identifiers archived at Zenodo (DOI).]

- **Code availability:** R and Stan code reproducing all simulations, figures and tables: Zenodo (DOI) / GitHub (URL).
- **Author contributions (CRediT):** T.M.: conceptualisation, methodology, software, formal analysis, writing. [Update for co-authors.]
- **Use of LLMs:** Large language models are the object of study. Code drafting and copy-editing were assisted by an LLM-based coding assistant (Claude, Anthropic); all analyses were specified, checked and interpreted by the authors.
